Education

Western Washington University

Electrical & Computer Engineer Undergraduate - GPA: 3.62/4

Sep. 2024 – Present

Bellingham, WA

Skills

Languages: Assembly, C, C++, Python

Software Tools: KiCad, LtSpice, MatLab, OnShape, STM32CubeIDE, Arduino IDE

Projects

Tiny PacMan | STM32 MCU, C, STM32 CubeIDE

May 2026

- Collaborated with a classmate to develop the game PacMan by using a mini OLED display, a STM32 MCU, a joystick, and a mini speaker for music and sound.
- Converted potentiometer data using a ADC system into two readable channels, then using DMA to transfer this data into a buffer converting into cardinal movement.
- Initialized all bits and heavily debugged the logical system using C on the STM32 Cube IDE, utilizing a SysTick loop to apply logic behind Joystick input values to modify a matrix for assisting an ever updating Maze.
- Planned and allocated tasks of the project, scheduling workload, and communicated whenever either of us needed feedback or general help.

Real-Time BART Display | KiCad, Arduino IDE, OnShape, C++, NodeMCU

August 2026

- Created an mini San Franciscan BART display using an ESP8266 and an OLED.
- Fetched real-time BART API data, processing it into a visual format and outputted onto the OLED using an I2C system.
- Utilized KiCad to research and develop a logic converting PCB providing connection between the NodeMCU and OLED, and assembling everything by hand.
- Made educated economic decisions based off of market prices and production quantities.

8-bit Breadboard Computer | Arduino IDE

June 2026

- Constructed the components of an 8-bit computer using chips, LEDs, capacitors, EEPROMs, and wires on a breadboard, combining their functions to create a working computer.
- Developed first-hand knowledge on each component of a computer, how each component may function or be logically created, and how when functionality is combined makes up a computer.
- Ran a program by hand by only manipulating the sequence of data bits in parallel with clock cycles

Work Experience

Bainbridge Thai Cuisine

October 2023 – September 2024

Food Service Worker

Bainbridge Island, WA

- Utilized prior knowledge and experience to train new workers providing help and information when necessary
- Collaborated with coworkers to maintain an efficient kitchen environment under stressful conditions
- Worked as a team while promoting to a positive kitchen environment

Extracurricular Activities

Club Soccer

2009 – 2023

Team Member

Washington

- Delivered real-time precise feedback during high-speed play to communicate field positioning and fix changes in defense.
- Coordinated with 13-16 players and coaching staff to execute game plans contributing to a top of division finish.
- Balanced a demanding athletic commitment (practices, travel, and games) alongside week-long coursework
